FORWARD

Robert Burns once wrote, "The best laid schemes o' mice an' men gang aft a-gley." Thus it went with many of the plans for this book. We are not apologizing for the 1965 Porphyry, only for its delay. We hope that this year's Porphyry contains all of your memorable moments of the year 1965 at Tech and that you will agree with us that it was well worth waiting for.
1965 Porphyry Staff

PRESIDENT OF THE COLLEGE

TO THE STUDENTS

I write this shortly before commencing my duties as your new president. You and your Institute have grown to maturity under the able direction of Dr. E. J. Workman. Our greatest future stimulation will continue to be the challenge of excellence. I look forward with optimism towards our successful meeting of this challenge.

As an 11 year old friend said, "Ignorance is obsolete." Our mutual task is that none of us become obsolete.

You have my deepest concern that your progress and the progress of our institute continue to augment your pride in our mutual association, and that together we meet the challenge of excellence.

Sincerely yours,

STIRLING A. COLGATE

DIRECTOR OF THE COLLEGE

TO THE STUDENT BODY

The practice of identifying college generations according to decades goes back no further than the decade of the twenties. We remember Joe College and Betty Coed, and although the times then seemed wicked enough to satisfy everyone, we now think of them as "the innocent years." They preceded the Great Depression.

And to continue the process of oversimplification, we call up the generation of the Thirties—disenchanted, serious, generally misguided, dedicated to social protest, obstinately pacifist. That generation perfected its education in Africa, Italy, France, Germany, Guadalcanal, and Okinawa.

What can we call the forties?—the interrupted generation? Or, considering the great changes between 1941 and 1945, the transmuted generation? Certainly, that decade began with students of one kind and ended with students of another kind altogether.

The shock of change induces a kind of torpor. The organism rests, testing its new dimension of being. We call it "the silent generation," the generation of the fifties, and we lament its nervelessness, its caution, its passionless compulsion (as we see it) toward security. We are in nowise prepared for the decade to follow.

What then, shall we call it, your generation of the sixties? "Disturbed?" "Overstimulated?" Both have been suggested. But I agree: it is too early. You are barely at mid-point. You cannot know yourselves, but must live out the times.

Sympathetically,
HOWARD SYLVESTER

Kamran Mahshid
Teheran, Iran

IN MEMORY
of
Kamran Mahshid

It can be said of few, that they lived
their entire lives with enthusiasm.
Perhaps tho, these are the words that
one could most remember Kamran by.
He loved life
He ran to meet every new experience
He made friends with ease
He shall be remembered.

CLIFFORD R. KAIZER
1964*
Professor of Chemistry
Head of Department
PhD UNIVERSITY OF ILLINOIS

The chemistry department deals with the education of the student in practical and theoretical research. The creation of an active interest in the composition of matter and its components is the goal of the department.

Upon the completion of his course of studies the student is very well trained in the aspect of organic, physical, inorganic, and analytical chemistry. Such training opens many fields of endeavor for the student including graduate work.

DAVID W. MITCHELL
1962
Professor of Mining and Metallurgy
Head of the Department
PhD UNIVERSITY OF CALIFORNIA 1947

The engineering department's primary concern is in preparing the student in the mining, metallurgy and petroleum fields. The mineral engineering student completes a rigorous curriculum in all fields of basic science, with emphasis on chemistry and physics, as well as studies in his own particular field.

To complete the studies for a degree in one of the engineering fields the student is concerned with the mechanical and chemical phenomena of nature, as well as the development of his ability to solve problems quickly and efficiently.

CLAY T. SMITH
1947
Professor of Geology
Head of Department
PhD CALIFORNIA INSTITUTE OF TECHNO-
LOGY 1947

The geology department introduces the student to the study of the constitution, structure and history of the earth. The geology student finishes his course of studies with a working knowledge in the many aspects of the mineral sciences. Increasing diversification has led to specializations such as petroleum geology, mining geology, and even less related fields as geophysics and geochemistry.

RAFAEL SANCHEZ-DIAZ
1947
Professor of Mathematics
Head of the Department
PhD UNIVERSITY OF CALIFORNIA 1935

The mathematics department is the preparatory field of all the aspects of science. The theoretical ideas of all science are founded upon numerical systems and the translation of these systems into applicable solutions.

The department's aim is to present the fundamentals to each student in such a manner as to help the student to become more proficient in his own field or to help the mathematician himself understand the bases of the other fields.

MARVIN H. WILKENING
 1948
 Professor of Physics and Geophysics
 Head of Department
 PhD ILLINOIS INSTITUTE OF TECHNOLOGY
 1949

The purpose of the physics department is to introduce the physical aspects of both the material and theoretical universe. The student learns about the transformation relationships of mass and energy and their applications.

The physics department has a two fold job, to train and prepare students for careers in physics and to introduce all other students to the fundamentals of the physical world.

WILLIAM HUME
1942
Professor of Physics
Basic Science Advisor
PhD JOHN HOPKINS UNIVERSITY 1934

The basic science curriculum is designed to allow a maximum of selection on the part of the student and to demand a minimum of specialization. It is, therefore, best suited of all our degree programs for the student who desires a general education with a rather broad coverage of the physical science-mathematics fields. It is particularly adaptable to the needs of a student who may wish to complete at the Institute his preparation for secondary-school teaching in science or mathematics.

HOWARD E. SYLVESTER
1949
Professor of Humanities
Head of the Department
PhD UNIVERSITY OF WASHINGTON 1954

The humanities department provides the basis for the understanding of the student's specialty in relation to other areas of intellectual activity.

Through an acquaintance with literature, history and the arts, the student can develop an understanding both of himself in relation to the rest of the world and of his own discipline in relation to other disciplines.

The department's job is a difficult one since it must introduce the student to all the major humanistic disciplines and provide the impetus for the student to make deeper explorations into those disciplines of his own time.

THE HUNS

The Sons of Fitch from Presidents

ST. PAT'S

You load 16 tons, and what do you get?

Hey, Tim, how about a little more window cleaner?

Bring the coconut to Daddy.

Okay, you honey-dippers, have at it.

ST. PAT'S

We give them all a bath whether they need it or not.

The "drunk tank" on Saturday night.

ST. PAT'S

It saves me from running back and forth keg.

The natives are restless tonight!

Just a sample of things to come.

ST. PAT'S

A sack of lime for little o'le me.

ST. PAT'S

Now how do I get down!

It looked closer before.

What do you mean you want it over there?

Another campaigner falls by the way-side.

Wait 'til Dr. Brook sees this!

Pssst! Your slip is showing.

Once more with passion.

ST. PAT'S

One more wise crack and I'll crown you!

S-S-Smack!

Do you think Cecil B. DeMilles could top this?

All that remains of St. Pat's.

New World Ahead

To the graduate who has just completed another phase of his education, there is a deep sense of pride and accomplishment. The door to the new world of the future has been opened a little wider . . . he has taken another step forward toward creating a rewarding lifetime career.

Preparing for the future is part of the pattern of our national life. In industry it is typified by the constant planning at Kennecott's Chino Mines Division. Through the years, this New Mexico copper producing company has never relaxed its efforts to develop the improvements that are the best assurance of continued successful operations in the years to come.

Right now, Kennecott is engaged in a major expansion program. It is reinvesting millions of dollars to increase the production of copper. When the program is completed, it will strengthen Kennecott's position in the world copper market.

To the people of New Mexico, this means the prospect of continued benefits, some of which help support the state's educational system.
