

Jean is a Professor Emerita at New Mexico Tech. She did undergrad work at UC Berkeley, and got her Ph.D. at the University of British Columbia. She held post-doctoral positions at University of Sussex and at the National Radio Astronomy Observatory. In 1980 she took a job in Tech's Physics Department, where — somewhat to her surprise — she remains all of these years later.

In science, astrophysics is what makes her heart sing, and she is especially interested in topics which can be studied with radio astronomy. Her research leans toward radio galaxies, clusters of galaxies, cosmic rays, astrophysical magnetic fields, and pulsar magnetospheres.

She is delighted that her life has taken her to Socorro. She loves the town, the friendly people, and the diversity of cultures and landscapes that New Mexico has to offer.
